FRENZELIT novapress ® MULTI II

The "steam seal"

Patented composite material made of aramid fibers and graphite as a functional filler. The material is oil-resistant, has a low leakage rate while simultaneously providing good pressure stability. The first reliable solution for steam after asbestos was banned.

Typical areas of application are saturated steam applications (max. 250°C) and seal connections generally subject to dynamic stresses.

Physical values*

Density according to DIN 28 090-2 in [g/cm³] 1,50

Tensile strength according to DIN DIN 52 910 in [N/mm²] 28 (longitudinally) 12 (laterally)

Pressure stability according to DIN 52 913 in [N/mm²] 32 (175°C.) 22 (300°C.)

Compression according to ASTM F 36 J in % 7

Spring recovery according to ASTM F 36 J in % 60

cold compression value according to DIN 28 090-2 in % 6,0

Cold recovery value according to DIN 28 090-2 in % 3,0

Warm setting value according to DIN 28 090-2 in % 10,0

Warm recovery value according to DIN 28 090-2 in % 2,0

Cold recovery value R according to DIN 28 090-2 in % 0,040

Specific leakage rate according to DIN 3535-6 in [mg/m*s] < 0,100

Specific leakage rate according to DIN 28 090-2 in [mg/m*s] 0,100

Media resistance in ASTM F 146

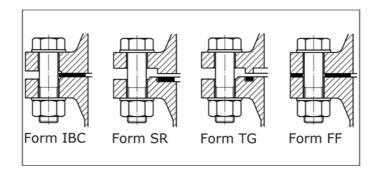

```
according to ASTM IRM903 after 5h/150°C, change in weight in % 6 according to ASTM IRM903 after 5h/150°C, change in thickness in % 2 according to ASTM Fuel B after 5h/23°C, change in weight in % 8 according to ASTM Fuel B after 5h/23°C, change in weight in % 4
```

^{* =} Values for 2,00 mm Thickness

Seal shapes

Shape	Description
IBC	level sealing face
SR	M/F face
TG	groove - spring
FF	with drill holes
